

# Project Deployment

## Case Studies

### Challenge

One of the largest country club based in Singapore, the client looking for a Two-factor authentication solution due to company security policy to secure up remote VPN access together with 2FA. They need to manage their different vendors to protect against remote attacks such as phishing, credential exploitation and other attempts to take over their accounts. They also need to prevent unauthorized access to corporate networks, cloud storage, financial information, etc.

Seeking a 2FA solution that would enable their applications which the cyber attackers are unable to access their accounts without possessing their physical device needed to complete the second factor.

### Solution

MyNet Technologies Pre-sales team evaluated the client's requirements and proposed 3 kinds of 2FA solutions that involve their in-depth introduction and comparison. During project deployment, we simulated customer system environment in our office and installed 2FA into this stimulated environment to ensure smooth actual deployment.

### Results

The client is impressed with us being the only vendor who is able to provide multiple solutions for comparison and review.

With the implementation of 2FA solution in place, the client can now monitor what are the activity performed by the vendors with central managed platform in one portal. The successful deployment is a result of MyNet Technologies extensive experience in providing customized solution to match the organization business needs and improve work productivity.

## HIGHLIGHTS

Industry:

Country Club

Location:

Singapore

Solution:

Remote VPN access  
with 2FA Solution

Results:

Minimize the risk of  
cyber attackers
