Software-as-a-Service Cloud Suite

Case Studies

Challenge

A large international retail organization wants to switch to cloud-based email services as they find standard email server is in lesser demand, not much technical support from the principal. And cloud-based email service is more stable and more cost effective which many businesses are using.

Existing problem is users need to constantly update their operating systems. But they cannot afford for any downtime that might affecting their daily operations and must be fully optimized.

Therefore, they looking for experts to deploy cloud-based email suite for them to ensure smooth migration.

Solution

MyNet Technologies identified a number of tools for cloud-based SaaS deployment and push down to each user. Gain access to sophisticated applications.

Results

With the implementation of SaaS cloud suite, it helps to grow and increase productivity for the company.

Customer do not need to purchase, install, update, or maintain any hardware, middleware, or software. SaaS makes even sophisticated enterprise applications, such as ERP and CRM, affordable for organizations that lack the resources to buy, deploy, and manage the required infrastructure and software themselves.

Customer can access app data from anywhere and anytime. With data stored in the cloud, users can access their information from any Internet-connected computer or mobile device. And when app data is stored in the cloud, no data is lost if a user's computer or device fails.
